

Tanigo® - A SUCTION-MIRROR DENTAL DEVICE

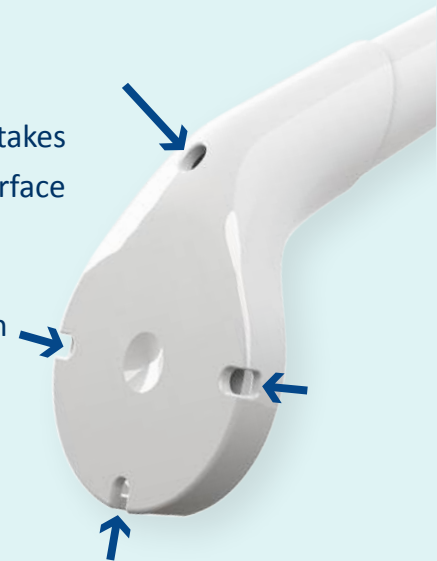

Moving from 3-Handed dentistry to 2-Handed procedures!

- The only disposable and recyclable dental device that combines the Suction, Mirror, and Retraction functions in one instrument.
You can now use only 2 hands and 2 instruments rather than 3, during a dental procedure.
- The Tanigo connects to the existing Suction tube, that serves as the Tanigo handle and liquid carrier, and that is attached to the dental-chair hose.
- Eight suction intakes surrounding the 50-degree angled anti-fog mirror assuring a continuous clear mirror, and less liquid accumulation in patient's mouth.
- ✓ **Effective and less stressful treatment**
- ✓ **Maximum Suction quality** - Upper, lower, front, back and surrounding suction intakes
- ✓ **Maximum Mirror clarity** - Anti-fog mirror, and continuous suction from mirror surface
- ✓ **Safe treatment** - No tongue and buccal tissue injury due to no sharp edges, and light and smooth texture
- ✓ **Cost and time saving** - An inexpensive disposable device. No need for sterilization
- ✓ **Environment friendly** All device parts are made of recyclable materials
- ✓ **Made in the USA**

**Multiple Front,
Rear,
&
Surrounding
Suction ports**

"Tanigo provides suction to keep the treatment area clear of water sprayed by the handpiece, while at the same time, the mirror stays clear of fluid for better visualization."

Dr. Gregori M. Kurtzman, USA
